

Brain Injury Technologies Think (BITT) Tank

An event organised in partnership with **CW CAMBRIDGE WIRELESS**

Augmented and Virtual Reality Technologies: Are they a Game Changer for Brain Health?

Thursday 4 April 2019

Madingley Hall, Cambridge CB23 8AQ

Are you interested in
AR/VR applications?

Do you have a
novel solution?

Join us at this free-to-attend event!

Augmented and Virtual Reality applications are increasingly proposed for the prevention and treatment of brain injuries. At a time when technology is rapidly evolving, this event will bring together leading clinical experts to define areas of unmet needs and potential applications of the technology.

It will also provide an opportunity for technology developers and clinical teams to showcase their technologies and on-going applications.

If you would like to take part in this technology showcase please get in touch with Rachel Kerr at rachel.kerr@cambridgewireless.co.uk

The event will be supported by members of patient advisory groups as well as key personnel from grant funding and investing organisations who will provide critical advice on proposed products and applications. The event is designed to encourage networking and future collaborations as well as provide for supportive exhibits of products.

To register, please visit the following page:
